Introduction

This publication sets out a Fundamentals overview of the living standard in the Czech Republic in the years 1993 – 2009 (for the duration of the independent Czech Republic).

The publication uses the data of the **Czech Statistical Office (CZSO)**, the **Czech National Bank (CNB)**, the **Ministry of Labour and Social Affairs (MLSA)** and own calculations of the **Department of Analyses and Statistics**.

Income and Expenditure of Households is well – documented by data of Household Budget Survey (concrete types of households) **and National Budget Survey** (sector of households – macro).

Household Budget Survey: listed in the tables are data from the sample survey of household budgets (respondents) and National Budget Survey (sector of households – macro).

Household Budget Survey: listed in the tables are data from the sample survey of household budgets. Households (respondents) included in household budget statistics are sampled by the method of purposive quota sampling. Measured were the social groups of **employees** (person having a contract of employment, who do manual work in the area of production, transport, services, etc., or intellectual work at all levels such as managerial, conceptual and scientific, operational, technical, services (other employees), **self-employed persons** (persons having no contract of employment, but are engaged in business except for agriculture), work freelance or work for fees, **farmers** (persons who are engaged in agricultural production and are either members of and work for an agricultural cooperative or are engaged in agricultural production in enterprises of any kind or are self-employed in agriculture production – only in the years 1993 – 2005), **pensioners** (without EA members). Supplementary sample comprises families with children, living just at subsistence level. Unemployed are not included.

Net household income defined for the sake of quota sampling is **calculated as gross income less the total of income taxes and compulsory health and social insurance contributions**. Loan, credits, and withdrawals of savings are not included.

Structure of household incomes included incomes from employment, social and other.

Net household expenditure (defined for the sake of quota sampling) is **calculated as gross expenditure less the total of income taxes and compulsory health and social insurance contributions**. Deposits and repayments of loans are not included.

To ensure international comparability of the statistical indicators, the items of money expenditure were re-arranged to comply with the national version (CZ-COICOP) of the International Classification of Individual Consumption by Purpose.

All data of Household Budget Survey are per-capita calculations, if you need results for household in total, you can use table in the end of this text.

As the complement of income characteristics are in the table 4 - 6 stated basic data about incomes, expenditures and deposits of **households sector** (by National Accounts for Households Sector).

The characteristics of wage development were elaborated on the basis of the Czech Statistical Office (CZSO) data. The data concerning the average gross month wage have been published since the 1st quarter 2009 according to the new methodology that creates the integral part of the reform of statistical survey system. Some reviews dealing with average wages that were published sooner are currently not available. The main stress regarding publishing the average wage has been laid since 01.01.2009 on so called Full Time Equivalent (FTE) of employees (taking into account work load) in the whole national economy and encompassing also data

concerning business entities with less than 20 employees that are supplemented on the basis of the CZSO mathematical model (that means that the average gross monthly wage for the whole national economy comprises the data for all employees). The average wage conception published sooner preferred in its declaration the number of natural persons and did not comprise the business entities with less than 20 employees. The other important methodical change implemented by the CZSO has been the elaboration and publishing of data concerning average wages according to the Branch Classification of Economic Activities CZ-NACE (national version NACE Rev. 2), that replaced the CZ-NACE (national version NACE Rev.1.1). The data upon the average gross month wage taking into account the methodical change in survey mentioned above have been available only since the year 2000. The data for individual regions were acquired through the so called “enterprise method” – i.e. according to the seat of registered business headquarters, shall not necessarily fully characterize the situation within given territory. Some differences between data published in this publication and data mentioned by CZSO arise from different methodology used for setting the time series and for recording data for current period.

To ensure international comparability of the statistical indicators, the items of **money expenditure** were re-arranged to comply with the national version of the international Classification of Individual Consumption by Purpose (CZ-COICOP). The coverage of the items of the expenditures is evident from their names. In expenditure item named “miscellaneous goods and services” is personal care, things for personal use and accessories, social care expenditure, all type of insurance, financial services, etc.

Trends in **consumer prices** are measured on consumer baskets based on a set of selected kinds of goods and services paid for by population. Goods and services which have a significant share in the expenditure of households are chosen to be price representatives. The current consumer basket includes about 729 particular goods and services (representatives) which are split into 12 divisions according to the national classification CZ-COICOP based on the international Classification of Individual Consumption by Purpose. The base period weights for the

calculation of group and aggregate indices are derived from the structure of household expenditure derived from 2005 Household Budgets Statistics.

Harmonized indices of consumer prices (HICP) came into being in the EU in response to the need to establish comparable indices of consumer prices so that inflation trends in the EU member states to be used as a criterion for the accession to the European Monetary Union can be measured. There are certain differences between the structure of the consumer basket for the national index of consumer prices of the CR and the structure of the consumer basket for the HICP. The HICP weights include receipts from purchases made in the CR by foreigners and does not include hypothetical rent, whereas the national index of consumer prices includes hypothetical rent and does not include receipts from purchases by foreigners.

All data (with the exception of CPI data) of the year 2009 are preliminary ones, data of National Budget are preliminary ones, data of National Budget are preliminary ones for all years.

Note: data indicated "x" – in this year statistical survey did not exist.

Average Number of Members in Households
(Household Budget Survey - CZSO)

	1993	1994	1995	1996	1997	1998	1999	2000
